

Markov Chains and applications CM

Course title - Intitulé du cours	Markov Chains and applications CM
Level / Semester - Niveau /semestre	M1 / S1
School - Composante	Ecole d'Economie de Toulouse
Teacher - Enseignant responsable	Jean-Paul IBRAHIM
Other teacher(s) - Autre(s) enseignant(s)	
Other teacher(s) - Autre(s) enseignant(s)	
Other teacher(s) - Autre(s) enseignant(s)	
Other teacher(s) - Autre(s) enseignant(s)	
Other teacher(s) - Autre(s) enseignant(s)	
Lecture Hours - Volume Horaire CM	15
TA Hours - Volume horaire TD	0
TP Hours - Volume horaire TP	0
Course Language - Langue du cours	Anglais
TA and/or TP Language - Langue des TD et/ou TP	

Teaching staff contacts - Coordonnées de l'équipe pédagogique :

E-mail : jean-paul.ibrahim@ut-capitole.fr

Office : TJ16

If you have questions, you may drop by my office at any time but it is better to make an appointment before. You can also send me e-mails.

Course's Objectives - Objectifs du cours :

This course is an introduction to the Markov chains on a discrete state space. At the end of the course, students must be able to : - Understand the notion of a random process.

- Give the definition of a Markov chain on a discrete state space .
- Recognize any experiment or any real-life situation that can be modeled using Markov chains.
- Give the transition matrix of a given Markov chain.
- Recognize homogeneous Markov chains.
- Deal with closed and open communicating classes and then with irreducibility
- Deal with transient and recurrent states.
- Determine, when it exists, an invariant distribution.
- Write the system that allows to compute the probability to hit a state j starting from state i .
- Write the system that allows to compute the expected time to hit a state j starting from state i .

- Understand the link between the long-run proportion of time spent in a given state, the expected return time to this state and the invariant distribution.
- Understand the definition of an aperiodic Markov chain and the convergence to equilibrium.
- Applications : Gambler's ruin, life insurance, Penney's Game.

Prerequisites - Pré requis :

Probability basis : Sample space (finite or countably infinite), conditional probability, random variables, convergence in distribution. Linear algebra: basic operations on matrices, diagonalization.

Grading system - Modalités d'évaluation :

One final exam.

Bibliography/references - Bibliographie/références :

Please check the moodle workspace for more information about references.

Distance learning – Enseignement à distance :

Distance learning would be implemented on a regular basis by implementing : - Interactive virtual classrooms - Online exercises and assignments - Remote tutorials - Chatrooms/Forum.
